Product Description

Jaw crusher is also called jaw crasher, which is to crush stone by adopting the principle of mutual extrusion between jaw plates. It is often used as the first process to crush all kinds of rocks with less than 320MPa compressive strength into medium particle size for one time.

Jaw crusher is always used with cone crusher, impact crusher and sand maker to constitute the sandstone production line. Jaw crusher can be divided into PE series and PEX series, of which the PE jaw crusher is used for coarse crushing, and PEX jaw crusher for medium and fine crushing.

Performance Characteristics

1. Deep crushing cavity, high efficiency and energy saving;
2. Strong bearing capacity, high stability;
3. Advanced technology, long service life;
4. Centralized lubrication system, easy maintenance;
5. Simple structure, convenient maintenance;
6. Large discharging adjustment range, one crusher has multiple usages;
